

## MYtxtBOX Pro Account API – Version 1.0

MYtxtBOX Pro API allows you send messages from your account.

The API is based on standard HTTP, thus making it easy to write and test applications with the standard HTTP client libraries provided with most application frameworks.

### Base URL:

All URLs referenced in this document have the following base URL:

[http://site.mytxtbox.com/sms\\_api](http://site.mytxtbox.com/sms_api)

## API Requests

### Credentials

All requests to the SMSGH API require authentication. The authentication details must be included in either the GET request URL or the POST data body. Authentication details are passed as 'username' and 'password'.

### Supported Methods

The SMSGH API supports POST. Please ensure that all argument values are properly URL encoded ([http://en.wikipedia.org/wiki/URL\\_encoding](http://en.wikipedia.org/wiki/URL_encoding)).

### Status Codes

MYtxtBOX Pro API returns the following status codes. Each status code also comes with an appropriate status description.

- OK: The request was successful
- Authentication Failure...Please check your username and password.

## API Methods

### Messages/Send

The send API method enables a client to send a single text message.

### Parameters

Parameter	Description
username	Your MYtxtBOX Pro account username
password	Your MYtxtBOX Pro account password
msg	The message content. A maximum of 160 characters for a text message. You can however specify up to three parts.
to	The recipient phone number.

*Successful Response*

OK
----

*Unsuccessful Response*

Authentication Failure...Please check your username and password
--

*Example*

Call:	http://site.mytxtbox.com/sms_api?username=xxxxxxx&password=xxxxxx&msg=this+is+a+test&to=2332xxxxxxx
Response:	OK
